Question 1: Tell us, what do you hope to learn during this experience with us?

Power BI, a data visualization software product, makes it possible to turn our data into coherent, visually impressive, attractive insights. This makes me excited to learn to build interactive dashboards that are visually appealing and provide the ability to quickly and efficiently draw insights from even the most complicated datasets.

Through the Forage PwC Power BI Virtual Experience program, I will be able to improve my Data Visualization and Analytics Skills. I also wish to strengthen my design thinking and digital storytelling skills to better convey intriguing insights to customers and stakeholders. I also hope to perform Data Modelling and hold a good command over Data Analysis Expressions. There are many opportunities in the global market and I want to be job ready.
